

1

3*M8-Stainless steel expansion bolts and nuts (not included)

Concrete drilling machine

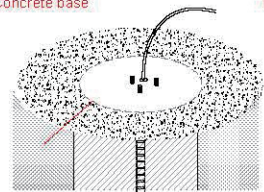

Hammer

1.Prepare the required installation materials as shown in the diagram

2

Concrete base

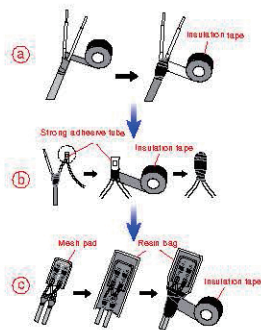

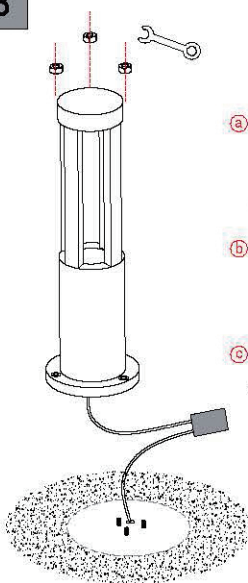

Embedded wiring pipe

1. If it needs to be installed on grass or soft ground, it is necessary to prefabricate a concrete base of suitable size with cement. After the concrete has set, drill holes and install expansion bolts.

2. If it needs to be installed on a hard ground, first determine the installation location, then drill holes and install expansion bolts according to the installation size of the light.

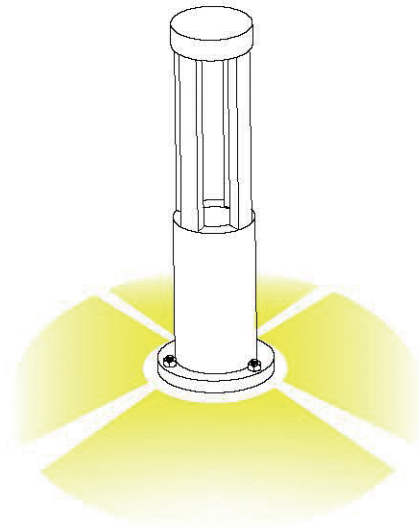

2.Pour concrete piles according to the installation surface. According to size drilling holes, and finally install the expansion bolts and fix them

3

3.Connect the wires as shown in the figure, make waterproof and anti-leakage protection, and then fix the screws

4

4.Clean the light after installation
